

Hi! There are two relatively minor changes we'd like to make to the portal:

1. Show financial amounts to 2 decimal places throughout the portal

Currently, several financial figures are being rounded off outside of the actual invoice section. This creates discrepancies when we're speaking to clients because the figures shown on the portal don't always match the invoice.

We need **all monetary/financial amounts to be displayed to two decimal places throughout the portal**, including:

- Invoice amounts
- Tax savings
- Savings calculations
- Percentage/total savings where applicable
- Figures shown under the **Finances** section
- Individual client/property invoice views
- Any other place where the invoice/savings amount is displayed

For example, if the calculated savings are **\$1,245.67**, it should show **\$1,245.67** rather than **\$1,246**.

The **Notice Value / Market Value** can remain as it currently is where it makes sense to display it in thousands, since those values don't need the same decimal-level precision. The main requirement is that **calculated financial amounts, particularly savings and invoice amounts, retain their actual values and display two decimal places**.

2. Clarify and improve the Finance dashboard metrics

There is currently some confusion around the metrics and graphics being shown in the Finance section. We need the dashboard to make it much clearer:

A. Total money expected / owed to us

We need an explicit metric/column showing the **total amount of money we are expected to receive** based on invoices that have been sent.

For example, if we have sent 5 invoices and those invoices represent a total of \$X in savings/revenue, we should be able to immediately see that \$X is the **total amount we are expecting to collect**.

Currently, the dashboard shows things such as "**114 protested**" and "**client paying**," which are useful, but they don't tell us the corresponding dollar amount we should expect from those invoices.

So we'd like a clear metric such as:

Total Expected / To Be Collected: \$X

This should be based on the invoices/financial records that have actually gone through, rather than requiring us to calculate it manually.

B. Monthly expected amount

Since the Finance section already breaks things down by month, we'd also like to see the **total amount expected for each month**.

For example:

Month	Expected	Collected
January	\$X,XXX.XX	\$X,XXX.XX
February	\$X,XXX.XX	\$X,XXX.XX
March	\$X,XXX.XX	\$X,XXX.XX

C. "Collected So Far"

Right now, we can see the amount **collected each month**, but we have to manually add all the months together to determine how much we've collected overall.

Could we add a metric for:

Collected So Far: \$X,XXX.XX

This should be the cumulative total of all payments collected up to the current date.

Essentially, the Finance section should allow us to quickly answer three questions without doing manual calculations:

1. **How much have we collected so far?**
2. **How much are we still expected to collect?**
3. **How much are we expected to collect each month?**

The goal is mainly to make the Finance dashboard more accurate, transparent, and useful at a glance, while ensuring that the figures match the actual invoice amounts shown elsewhere in the portal.
