

To be done by tuesday evening-

Change Required: 0-Savings Invoice Emails

Currently, when sending invoices, **each property/invoice can result in a separate email**. We need special handling for invoices where the **savings amount is \$0**.

1. Club all \$0-savings invoices for the same client into ONE email

For example:

- Client has **10 properties**
- All 10 invoices have **\$0 savings**
- Currently → client may receive **10 separate emails**
- Required → client should receive **1 single email** containing **all 10 property invoices**

The grouping should be **per client/contact**, similar to the existing “same contact, one email” functionality shown in the screenshot.

2. Create a separate email template specifically for \$0-savings invoices

We need a **dedicated email template for 0-savings invoices**, rather than using the normal invoice-sending template.

The flow should therefore be:

Normal savings invoices

→ Use the existing invoice email template.

\$0-savings invoices

- Group all applicable invoices for the same client/contact together
- Send **one email** containing all of their \$0-savings property invoices
- Use the **new 0-savings-specific email template**.

3. Mixed scenario

If a client has both:

- 3 properties with savings
- 7 properties with \$0 savings

Then the system should **not mix them into the same email**.

Instead:

- Savings invoices → existing invoice email/template and grouping logic
- \$0-savings invoices → **one separate consolidated email** using the new 0-savings template

In short

For every client/contact, all invoices with \$0 savings should be consolidated into a single email, with all relevant property invoices attached/included, and that email must use a dedicated “0 Savings” email template. \$0-savings invoices should remain separate from regular savings invoices.

Other minor changes:

Can do later

I'd suggest having **two separate Notes sections**:

1. **Client Notes** – one general notes field attached to the client/contact, where we can record information that applies to the client overall.
2. **Property Notes** – a separate notes field for each individual property, so we can record property-specific information without mixing it with the client's general notes.

Ideally, the client notes should be accessible from the **Client profile**, while each property's notes should be accessible from the **Property details** page.

Future Changes (for october):

Invoice template (3 different)

Current

Arbitration (only property details and money owed - no appraised or market description and all)

Homestead
