

Lone Star Property Tax

Process Overview (Simplified & Structured)

1. Client Onboarding & Property Setup

- **Prospect Identification**
Initial lead or inquiry received
 - **Property Information Collection**
Collect address, ownership details, and basic inputs from client
 - **CAD Data Retrieval**
Pull official property details (account number, jurisdiction, valuation data) from CAD
 - **Agreement Preparation**
Prepare AOA and service contract using collected data
 - **Agreement Execution**
Send to client → receive signed agreement → client officially onboarded
-

2. Protest Authorization

- **Authorization Preparation**
Prepare protest authorization based on CAD records
 - **Authorization Filing**
Submit authorization to CAD (method varies: online / mail / system)
-

3. Valuation & Protest Initiation

- **Notice Value Receipt**
Receive official notice of appraised value from CAD
- **Value Entry & Recording**
Enter updated values into system and store for reference
- **Document Filing & Storage**
Organize and file all received valuation documents
- **Protest Report Generation**
Generate internal report identifying properties to be protested

- **Protest Submission to County (CAD)**
Submit protest declarations via appropriate channels (mail / online)
-

4. Hearing Management

- **Hearing Schedule Receipt**
Receive hearing dates from county/CAD
 - **Calendar Integration**
Log all hearings into Google Calendar for tracking
 - **Pre-Hearing Verification**
Ensure all documents, evidence, and property details are complete
-

5. Hearing Outcome & Resolution

- **Hearing Conducted**
Case reviewed via informal or formal process
 - **Outcome Determination**
 - Settlement (value reduction agreed)
 - Board Order (final decision issued)
-

6. Post-Hearing Financial Process

- **Invoice Preparation**
Calculate savings and applicable fee
 - **Invoice Issuance**
Send invoice to client
 - **Payment Collection**
Track and confirm payment completion
-

7. Key Operational Characteristics

- **Combination of Individual + Bulk Actions**
 - Authorization and protest filing often handled in bulk
 - Hearings and outcomes handled per property

- **Multi-Step Dependency Process**
Each stage depends on completion of the previous step
 - **High Importance of Timelines**
Deadlines, hearing dates, and follow-ups are critical
-

Dashboard Design Proposal

Objective: Improve Visibility, Decision-Making, and Operational Efficiency

1. Overview

The goal of this dashboard is to provide a **clear, real-time view of operations** across all property tax protest cases.

Instead of functioning as a data display, the dashboard is designed to act as a **decision-making tool** that helps users quickly understand:

- Where cases stand
 - What requires immediate attention
 - Where bottlenecks exist
 - How operations translate into revenue
-

2. Dashboard Structure

The dashboard is divided into four main sections:

A. System Health & Key Metrics

- Total Active Cases
- Cases in Key Stages
- Hearings This Week
- Revenue Pending

Mockup 1: High-Level Dashboard View

Active Cases	Authorized	Hearings This Week	Revenue Pending
1,284	842	96	\$124,000

System Health:  Needs Attention

 32 cases near deadline  18 missing docs  12 urgent hearings

Pipeline Overview

Prospect	Signed	Authorized	Filed	Scheduled	Hearing	Closed
120	340	520	210	60	34	0

 40 stuck > 5 days

Urgent Actions

- 12 cases → Filing deadline in 3 days
- 8 cases → Hearing tomorrow
- 15 cases → Missing authorization

Today's Hearings

10:00 AM – 123 Main St
11:30 AM – 456 Oak St

Explanation

This view gives a **top-down understanding** of the system:

- Metrics → overall scale
 - Health → immediate risks
 - Pipeline → distribution of work
 - Urgent actions → what to do now
-

B. Pipeline Overview (Interactive Core)

- Visual breakdown of cases by stage
- Clickable stages to drill into data
- Indicators for stuck or delayed cases

C. Urgent Actions & Deadlines

- Filing deadlines
- Upcoming hearings
- Missing documentation

D. Batch & Financial Insights

- Batch processing status
- Revenue tracking
- Payment progress

Mockup 2: Detailed Operational View

Batch Operations

Batch Name	Type	Status	Properties
Dallas Authorization	Authorization	 Completed	87
Harris Filing	Filing	 In Progress	42
Mail Batch	Filing	 Failed	5

Financial Overview

Total Savings Generated: \$2.4M
Projected Fees: \$720K
Collected: \$410K
Pending: \$310K

Revenue Funnel

Filed → Hearing → Settled → Invoiced → Paid
210 96 72 65 48

Bottlenecks

Authorization Stage → Avg delay: 6 days
Hearing Prep → 22% cases missing documents

High Priority Cases

- 123 Main St → High value + hearing soon
 - 456 Oak St → Deadline in 2 days
-

Explanation

This section focuses on **operational depth**:

- Batch tracking ensures bulk actions are visible
 - Financials connect operations to revenue
 - Funnel highlights conversion gaps
 - Bottlenecks show where improvements are needed
-

3. Key Design Principles

1. Clarity Over Volume

Only the most important information is visible at the top level

2. Action-Driven Design

Every section answers: *What should be done next?*

3. Layered Information

- Dashboard → Summary
 - Property Page → Details
-

4. Real-Time Awareness

Deadlines, hearings, and risks are always visible

4. Expected Impact

Efficiency

- Faster decision-making
- Reduced manual tracking

Accuracy

- Lower risk of missed deadlines

Visibility

- Clear understanding of all ongoing cases

Revenue

- Faster progression from protest → payment
-

5. Conclusion

This dashboard transforms operations from a **reactive process** into a **proactive system**.

It enables:

- Better tracking of every property
- Clear prioritization of work
- Improved handling of bulk operations
- Stronger connection between operations and revenue
